

CLAIMS

1. A motor vehicle instrument cluster (1) comprising
an instrument panel in two parts (8, 10; 9, 10) at
least arranged on either side of a semi-reflecting
window (12; 13) and respectively generally at
right-angles and generally parallel to the axis of
vision (V1), characterized in that the part of the
instrument panel (8; 9) generally parallel to the
axis of vision lies sideways to the frontal part
(10) of the instrument panel at right-angles to
the axis of vision (V1).
2. The instrument cluster as claimed in claim 1, in
which the frontal part (10) of the instrument
panel is surrounded by two lateral parts (8, 9)
generally parallel to the axis of vision (V1).
3. The instrument cluster as claimed in either of
claims 1 and 2, in which the semi-reflecting
window includes at least one inclined (α) semi-
reflecting portion (12; 13) over the two parts of
the instrument panel (8, 9) and one portion (6)
parallel to the frontal part (10) of the
instrument panel.
4. The instrument cluster as claimed in any one of
claims 1 to 3, in which the window (6, 12, 13) of
the instrument cluster is in one piece.
5. The instrument cluster as claimed in any one of
claims 1 to 4, in which the window has an
irregular zigzag shape.
6. The instrument cluster as claimed in any one of
claims 3 to 5, in which the frontal part (6) of
the window is inclined on the axis of vision.
